Fire & CPR

Helping you comply with fire safety requirements. As the experts in fire testing and construction products regulation (CPR). BASEC delivers independent testing to meet the requirements of EN 50399, EN 60332-1-2, EN 61034-2 and EN 60754-2.

PCR & Training

Assessing cable manufacturing facilities and educating on quality since 1971, through the BASEC Product Certification Requirement.

As a precursor to product certification, an in-depth audit of a manufacturer's production facilities is undertaken to ensure on-going quality in line with industry standards can be maintained.

Low, Medium Voltage & Testing

Verification of cable product reliability is fundamental to operational efficiency.

Evidencing that the components selected for installation in your projects are fit for purpose is at the heart of what BASEC do. Download all live LV, MV and speciality cable product approvals from the website for inclusion in your tenders.

Product Certification

Regular testing of cables through a formal product certification supports manufacturers in maintaining consistent levels of quality.

The smallest change to the production methods or a change in material supplier can impact quality.

The BASEC scheme offers a market surveillance mechanism to track and address issues prior to product use.

Registered Stockists

Buy your cable with confidence – through an approved stockist!

On a mission to tighten up the supply chain, sourcing cable products from a Registered Stockist will give you assurance that the product has been handled with care in transit, and has maintained approved product quality achieved as part of the production approval processes.

Management Systems

Providers of integrated management systems approvals for ISO 9001 quality, ISO 14001 environment and ISO 45001 health and safety.

Central to your business's operational excellence, BASEC works with the industry to drive the highest level of compliance.

Be part of the journey!
